

Security Consultant

The Security Consultant will be responsible for the development and assessment of control environments, in addition to performing security and control audits. The Security Consultant will support regulatory compliance and deliver security controls to our customers with the highest level of customer care and attention to detail.

The ideal candidate will have at least 5 years of direct experience in IT security and controls. The position requires a strong working knowledge of network and client/server computing technology and generally accepted IT security and control principles and best practices. Hands-on experience and proven analysis, collaboration, communication and project management skills are required.

Responsibilities:

- Development of IT security and control policies
- Documentation of standards, procedures and guidelines
- Develop security architecture and standards for use by customers
- Work with IT project teams to integrate security and ensure compliance with policies and standards
- Coordinate control audits of IT infrastructure, applications, services, and processes
- Coordinate development, implementation and reporting of corrective actions
- Collaborate with customers to build and manage an effective, comprehensive security strategy and program that supports compliance with legal and business requirements

Qualifications:

- 5-7 years experience in an information security role required
- 2+ years project management experience
- Excellent written and verbal communication skills
- Broad technical knowledge and experience with systems, development, network and security technologies
- Experience with control frameworks, standards and regulations, including ISO 17799:2005, COBIT, ITIL, PCI, Sarbanes-Oxley, HIPAA, and GLBA
- Strong self-starter who is capable of working independently
- Major Security Certification (CISSP or CISA)
